SUMMARY

Software Engineer with 1+ year of experience building cloud-connected products for a climate-tech energy platform, working across distributed IoT systems, scalable data models, and full-stack web applications. Hands-on with AWS cloud infrastructure (IoT Core, Cognito, IAM, Lambda, EC2, RDS, DynamoDB), Python/Flask backends, and React frontends — including sole ownership of a customer-facing HMI and a scalable onboarding platform built from an open-ended, ground-up problem. CS graduate (2025) with a foundation in data structures, algorithms, and object-oriented design, and a track record of turning broadly scoped problems into shipped, production systems.

EXPERIENCE

Software Engineer — TOTEX Energy

June 2025 – Present

Climate-tech company building an all-in-one energy management platform (HVAC, hot water, EV charging, backup power)

- **Owned the HMI (Human-Machine Interface):** designed and built both the frontend (React) and backend (Python/Flask) for the interface used to monitor and control connected energy hardware.
- **Cloud infrastructure:** built and maintained services across AWS Cognito (authentication), IoT Core (device connectivity), IAM (access control), Lambda, EC2, Lightsail, S3, RDS, and DynamoDB.
- **Backend & APIs:** developed REST APIs in Python/Flask to connect the React frontend to backend services and device data.
- **Customer onboarding platform — data modelling & scalable schema design** took an open-ended problem ("onboard customers into the product purchase and pilot program") from scratch — designed a scalable data model, built the PostgreSQL schema from it, and shipped the full-stack onboarding form (React frontend, Python/Flask backend) end to end.
- **Collaboration:** worked within a 5-engineer team on architecture discussions, feature scoping, and debugging of distributed, cloud-connected systems.

Software Engineering Intern — Mr. Cooper

Jul 2024 – Aug 2024

- **Backend development:** contributed to backend components of a Surplus Food Management system (Java, Spring Boot, React, MySQL) — see Projects.
- **Key takeaway:** first hands-on exposure to production debugging, code review practices, and building for reliability/availability in a team setting — habits carried directly into work at TOTEX Energy.

PROJECTS

Customer Onboarding Platform

Python, Flask, React.js, PostgreSQL, AWS

- Built end-to-end onboarding system for energy product pilot customers — designed a normalized, fully scalable database schema supporting multi-tenant data isolation.
- Implemented secure authentication with AWS Cognito and IAM role-based access control for customer and admin workflows.

Surplus Food Management

Java, Spring Boot, React.js, MySQL

- Designed and developed backend components for a Surplus Food Management system, built during the Mr. Cooper internship.
- Optimized SQL queries and API calls to enhance system performance.

Document Data Duplicate Alert System

Python, Hashlib, MySQL, React

- Built a system to detect duplicate data downloads using hashing techniques, with a React UI for real-time alerts and metadata tracking.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Java, C, SQL
- **Cloud / AWS:** Cognito, IoT Core, IAM, Lambda, EC2, Lightsail, S3, RDS, DynamoDB

- **Backend:** Flask, REST APIs, Spring Boot
- **Frontend:** React.js
- **Databases:** PostgreSQL, MySQL, MongoDB
- **CS Foundations:** Data Structures & Algorithms, Object-Oriented Design
- **Tools:** Git, Docker, Postman, Gradle

EDUCATION

Sri Venkateswaraa College of Technology, Chennai, India

2021 – 2025

Bachelor of Engineering, Computer Science and Engineering

LEADERSHIP & ACHIEVEMENTS

- President, Programmers' Club, SVCT — organized hackathons and inter-college coding events
- President, CSE Association, SVCT
- Winner, Kings Engineering College Hackathon (₹15,000 prize)
- Received Leadership Award for contributions to technical events and mentoring
- Certifications: MongoDB University (MongoDB), Udemy (React Development), HackerRank (Java)
